VANDA WAVE TAPE INFORMATION SHEET

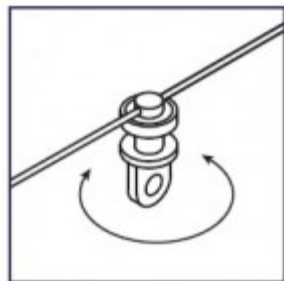

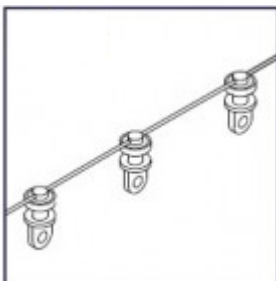

The Vanda Wave Tape is a simple but elegant heading comprising of a unique hook and tape system.

The tape is stiff, transparent and 77mm wide which allows for a consistent Ripple shape throughout the curtain giving it a very uniform look.

The pockets on the tape are exactly 1 cm wide, which makes it easier to calculate and every tenth pocket/cm is marked which enables quicker attachment of hooks without counting the pockets and therefore quicker and easier to install.

By inserting the hook where marked the curtain would be approx double the fullness, however the hooking position can be adjusted according to your requirements (for a smaller fold, hooks are spaced closer together, for a larger fold space the hooks further apart).

The gliders are spaced 6cm apart, held by nylon cord. The unique slimline shape of the gliders allows for tighter stacking.

The gliders/runners rotate making it easy to install and drape. The gliders can also be individually replaced if damaged over time.

PLEASE NOTE:

The amount of hooks provided with the tape **must** be used in order for the tape to marry up with the carriers when attaching to the track.

There is a marking every 10th pocket indicating where the hook should be placed. If placed in this pocket then the curtain will be nearly double the fullness, however should you not have enough fabric then you can adjust the hooking position and the tape can be cut down however the amount of hooks supplied originally must be used.

HEADING – 2mm
